

AIVIS length gauge - 39 marks @ 10 mm (nominal span 380.00 mm)

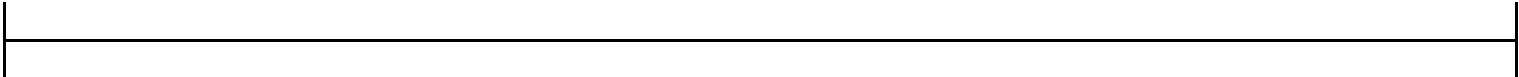

MEASURE the actual tick-to-tick span with a caliper and write it here: _____ mm

Then use $\text{pitch} = \text{measured_span} / 38$ in AIVIS_FIDUCIAL - do NOT assume the printed value.

Printed paper stretches with humidity. Glue to a flat rigid plate; prefer a steel/glass scale for production.

Keep the camera ROI within +/-15 mm of the mark row; text or ticks inside it break the detector.

VERIFY SCALE: outer tick-to-tick = 200.00 mm

AIVIS_FIDUCIAL=<pitch>:<x>,<y>,<w>,<h> nominal pitch 10

If it measures different, your printer scaled the page. Reprint at 100% (Actual size, no fit-to-page).
